Customer Connection Point (with SC Simplex Adaptor and Pigtail)

Customer Connection Point (Internal view)

The Customer Connection Point (CCP) is a Building Entry Point (BEP) which provides a fibre termination and network demarcation point external to the connected premise in a Fibre to the Home (FTTH) network. It also presents a network test point outside of the customer location.

It's high (IP68) sealing performance and a compact design allows it to be housed in a small subterranean access chamber (eg: "Toby Box") or wall/facade mounted whilst protecting the fibre connection point from water and dirt. Incoming and outgoing cables are sealed at the base of the CCP using a quick twist lock sealing mechanism. A vent gauze breather membrane prevents internal condensation.

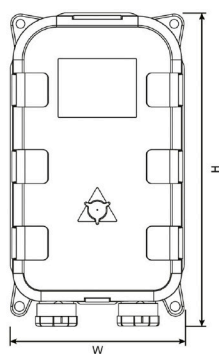

The CCP can house either 2 SC Simplex Adaptors or an LC Duplex Adaptor and can be supplied with an Adaptor and Pigtail (see reverse) as a kit.

Features and Benefits

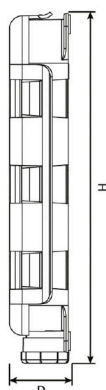

- IP68 sealing gives a high level of performance to prevent dirt and moisture ingress
- Breather membrane vent gauze to prevent moisture condensation
- 2 sealed cable entry points, at the base of the enclosure
- Positive fibre management to enable the use of both G652D or G657 single mode fibre types
- Minimum fibre bend radius of 30mm throughout
- Mounting for 2 x SC Simplex or 1 x LC Duplex adaptors
- Splice protector storage for 2 x 3A or ANT sleeves
- Mechanical fixing for cable strength member
- IK08 Impact Rating
- UV and VO rating
- Optional Customer Branding/Logo (minimum order quantities apply)
